

github

- * dev_5_1 = ome mirror
- * other ome branches never updated
- * bg_import = master feature branch
- * final pull request: branch bg-import and make request from there

local

fetch ome

fetch/merge of cocone if others work in cocone

push cocone dev_5_1
push cocone bg-import

checkout dev_5_1
merge ome/dev_5_1
submodule update --merge

before any checkout,
you may want to
stash, then clean:
git clean -ffxd :/

checkout bg-import
merge ome/dev_5_1
submodule update --merge
